Eligible to work in EU - Hungarian citizenship - Serbian citizenship – willing to relocate

Automated Testing - Performance Testing - QA Methodologies - QA Team Leadership

Senior QA Engineer with 10+ years of experience across manual, automated, API, performance, and regression testing. Built and scaled test infrastructure and quality workflows that improved release stability and significantly shortened feedback cycles in distributed agile teams.

Skills summary

- | | | |
|---|---------------------------|-------------------------------------|
| ➤ Test Automation | ➤ Ruby/Ruby on Rails | ➤ Selenium, Playwright, Cypress |
| ➤ Performance, API, Email Testing, | ➤ Javascript / Typescript | ➤ Capybara, Webdriver, Cucumber |
| ➤ Regression, Visual regression testing | ➤ Java, Bash | ➤ Rspec, Jest, Vitest |
| ➤ Test Plans, Test Cases | ➤ ReactJS | ➤ Docker, AWS |
| Documentation, Bug Tracking | ➤ NodeJS, ExpressJS | ➤ JMeter, Gatling, Blazemeter |
| ➤ Health Monitoring, Infrastructure | | ➤ Jenkins, CircleCi, Github Actions |
| ➤ QA Team leading | | |

Professional Experience

Ghost, remote

Staff Software Developer in Test

May, 2025 – February, 2026

- ❖ Owned end-to-end test suite for the Ghost open-source platform, building scalable test foundations (factories, domain abstractions, Page Objects, shared services) used across multiple apps
- ❖ Introduced and embedded BDD into everyday engineering work, coaching product teams to think in user flows and acceptance criteria instead of treating testing as a separate phase
- ❖ Improved CI reliability for E2E tests through sharding, parallelization, and better reporting, reducing flakiness and speeding up feedback for developers
- ❖ Contributed to monorepo-wide code consistency by helping define linting standards, structural improvements, and clearer JavaScript/TypeScript conventions across teams
- ❖ Selected work - open source contribution to E2E architecture on [Github](https://github.com)

Technologies - Javascript - Typescript - ReactJS - MySQL – TinyBird - Playwright – Vitest – Supertest - Jest

Active Campaign, remote

Senior Software Development engineer

April, 2022 – January, 2025

- ❖ Integrated into Ruby on Rails development team, focused on optimizing [Postmark](#), engaged in weekly sprints, leading to consistent delivery of features within tight deadlines
- ❖ Crafted a service that played a key role in detecting suspicious accounts that plan to send spam email Leading to detection of over 1000 fraudulent accounts monthly, without compromising legitimate users
- ❖ Upgraded account approval process to decrease customer support time on handling false suspended accounts that led to decreasing approval process by 10%
- ❖ Collaborated with the QA team to enhance testing efficiency, streamlined testing processes by migrating excessive end-to-end tests into Rails test suite which resulted in decrease of overall test run time by 20%

- ❖ Elevated test coverage from 60% to 85% through the implementation of comprehensive unit and integration tests, resulting in a significant reduction of end-to-end testing necessity for front-end releases

Technologies - Ruby on Rails - Javascript - Typescript - ReactJS - MySQL - RabbitMQ - Terraform - Rspec

Wildbit, remote

Senior Software Engineer – Testing infrastructure

May, 2019 – April, 2022

- ❖ Enhanced overall testing efficiency, allowing the team to run over 150,000 tests each day
- ❖ Developed an email health monitoring solution for Postmark with immediate feedback mechanisms with analytical insights, increased overall system reliability by 25%, enhancing customer satisfaction
- ❖ Reduced infrastructure provisioning time from ~1 week to ~1 hour by introducing containerized environments and infrastructure as code (Terraform)
- ❖ Decreased selenium monthly cost by 50% by move from EC2 containers to scalable AWS ECS and attained zero maintenance status by leveraging containerization techniques
- ❖ Constructed a library for validating real-world email content, that enabled full integration tests on the emailing service while reducing manual testing time by approximately 60 hours monthly
- ❖ Engineered a multi-location performance testing enabling comprehensive simulation scenarios, to address bottleneck impacting system responsiveness during peak usage times
- ❖ Onboarded team members by developing a structured training program with comprehensive documentation, hands-on sessions, providing tools for seamless execution of performance tests within the Engineering team

Technologies - Ruby - Javascript - Jenkins – Docker – AWS – Terraform – JMeter – DynamoDB – Selenium - Playwright

Wildbit, remote

Staff Software Developer in Test

Jan, 2016 – May, 2019

- ❖ Built and improved Postmark end to end test suite with over 3000 tests
- ❖ Decreased regression full testing time from a week to 30 minutes
- ❖ Architected performance testing test suite for [Beanstalk](#) to identify issues with slow activity updates
- ❖ Led QA engineers in personalized code review sessions, enhancing coding standards and ensuring compliance with best practices, which resulted in a 20% reduction of post-release defects
- ❖ Collaborated with product management and developers to align quality objectives with business goals
- ❖ Measured current capacity and worked closely with Engineering team to foresee future limitations

Technologies - Ruby - Java – Javascript - Jenkins – Selenium – GIT – SVN – Jmeter – Jira - Redline13

Education

Master degree in Computer Science - [Faculty of Technical Sciences](#), Novi Sad

Bachelor degree in Information Technology - College of Applied Sciences, Subotica
